

CYBER INTELLIGENCE - CyberInsight

Corporate Integrity has developed an innovative Service and System called CyberInsight which provides companies and organizations the possibility to identify organized activities of hackers or predict hacking attempts into the organization prior to the attack.

CyberInsight's ability to monitor such activities has already provided crucial help to local and Global different Organizations.

SOCIAL MEDIA MONITORING

With our social networks monitoring, you can know what your customers and competition are saying about you and what general feelings about your product are. Whether you employ a professional or you rely upon your own marketing genius, you know just how influential your customer comments and feelings can be, particularly if they're released through Twitter, Facebook or YouTube.

A negative or positive Tweet or Facebook mention by an influential person can either hurt or help your business. By using our tool that track these social media sentiments, you can respond quickly to the negative comments, mainstream press or highlighting the positive press.

Moreover, our tool will notify you whenever a new fake or malicious page\profile\group or mobile application is created.

ANTI PHISHING SYSTEM

With our anti phishing system, the customer can get alert if someone will try to copy his website to another location as part of fraud and illegal actions.

Moreover, our tool will make few times a day tests for new registered domains that can be use in the future for phishing attacks, for example MYDOMAIN.com is my real domain, MYDOMAIN.online can be available for phishing attack, while someone will buy this domain then the customer will get alert for it.
